Security furniture for new Cyber Security Operations Centre

Thinking Space has recently provided security consoles and an Evolution media wall at the new Cyber Security Operations Centre of Falanx Assuria. The Falanx Group are a security and intelligence provider, employing a team of security professionals and technology experts who work closely with clients to help them defend against global security threats. The cyber security company needed to accommodate eleven Cyber Security Analysts and Supervisors within the one new suite, working in teams of three. The desks were designed with curved profiles, allowing each team to converse with each other, whilst still being able to view

the Evolution media wall at the front of the room. The Moni-Trak perfect positioning rail was added to all the consoles, ensuring that the flat screen monitors could be positioned at any point along the length of the console.

It was important to convey the clients' branding right through the suite, so colours and materials were chosen to reflect this and create the corporate feel. In addition, Thinking Space added logos to the curved end panels of the consoles, to team with the wall logo in the room. The result is a new security operations suite which is cool, modern and sophisticated.

Control room furniture for Rutherford Appleton Laboratories

Thinking Space has recently installed new control room furniture for the ISIS scientific facility, Rutherford Appleton Laboratories at the Harwell Oxford campus. The existing control room was in desperate need of refurbishment after 32 years of use, with outdated 2-tier fully enclosed control consoles. ISIS Duty Officer, Neal Grafton, wanted to update the 24/7 environment to make the room more aesthetically pleasing whilst incorporating ergonomic design.

"There were several control desk companies considered but Thinking Space design, manufacturing process and materials suited our needs best. Thinking Space personnel were very courteous, knowledgeable and friendly from their first visit. They listened and noted

the specific needs for our refurbishment and used their years of control desk experience and expertise to suggest design changes and improvements thus providing an aesthetic and ergonomic solution" explained Neal.

Thinking Space designed three large L-shaped control desks; a main control desk with a built-in media wall at the rear, to mount the multitude of flat screens required. A separate Duty Officer desk and ancillary workstation was also created.

Now complete, the ISIS teams who occupy the control room 24/7 enjoy the new working conditions along with the project Physicists and Engineers; all have all praised the change.

"The old control room was in place for 32 years so the replacement had to be right for everyone and Thinking Space delivered an excellent product creating a refreshing up to date environment"

Neal Grafton, ISIS Duty Officer

Our race for Lexie

Ten of us participated in the Romsey Relay Marathon,

raising funds for Lexie Cooper-Barnes who suffers from Athetoid Cerebral Palsy. So far we have raised over £1400, which will help her purchase software to control her environment.

Space-saving media wall solution for Merseytravel

Tasked by Openview Security Solutions, Thinking Space has recently completed a media wall with a difference for clients' Merseytravel.

Housed in the splendid St Georges Dock ventilation building in Liverpool, the Traffic Control Centre required a media wall to display their multiple monitors, but were tight on space. Thinking Space created a custom designed Evolution media wall with an articulated arm system, which allows all engineering work to be undertaken from the front of the media wall with minimal space needed at the rear, thus creating more space within the room.

"The new video wall was installed as a key facility within our newly constructed Combined Control Centre operating both of the Mersey Tunnels in Merseyside. We are extremely pleased with our choice to opt for the Video Wall Solution offered by Thinking Space. It provides a number of attractive features such as integrated cable containment and management, extensive flexibility for screen mounting and positional adjustment, excellent integrated features to aid screen maintenance, as well as aesthetically being totally in tune with our ultra-modern Combined Control Centre."

Darren Hazlewood – Principal Operational Estates Officer, Merseytravel

Kanya UK appoints northern sales specialist

Thinking Space has recently recruited a new member to the Kanya UK team. Harsh Rao joins the company, who are celebrating their twelve year anniversary this month. Harsh has been working for the last eight years as a sales specialist for engineering companies. He will be based in the north of the country, serving clients from Birmingham up to Scotland. Since Harsh joined the company, he has been undertaking specialist training and has been assisting his new colleagues in the factory.

NEW RetailSystem launched

Launched at the beginning of 2015, Novus bring you their latest ergonomic solution for retail environments, the RetailSystem. A complete Point of Sale (POS) range for mounting touch screens, monitors and card readers, ideal for use in shops, airports, restaurants and retail outlets. Stylish yet practical, the RetailSystem comes in two finishes, with a choice of 3 column lengths, 3 monitor arm types and various mounting techniques for card readers and keyboards.

Production desk for ZBC studios, Tanzania

A meeting at the BVE London exhibition in 2013 with On-Air Broadcast has led to the manufacture of an 8 bay MW Video Systems production desk for ZBC TV studios in Zanzibar and Pemba, Tanzania. On-Air Broadcast's Managing Director, Peter Christmas, explained " we were looking for an 8 bay console

offering practical ergonomic design while also providing something aesthetically pleasing. It was also important to offer our client, ZBC TV studios, suitable future expansion for their increasing workloads. After evaluating several manufacturers, we decided on MW Video Systems, who were extremely good in designing our console, racks and media wall with great looks to suit our needs. They worked closely with our engineering requirements which had an overall impact with us and more importantly our client, ZBC".
